

# FEDSTRONG

## WHY FEDSTRONG?

### Mission Reliability

We manage systems with 99%+ uptime and 24/7 worldwide access.

### Data-Driven Results

We deliver analytics and reporting that power faster, informed decisions.

### Modernization & Efficiency

We re-engineer legacy processes, automate workflows, and establish cost-saving metrics for lasting value.

### Trusted Partnership

We collaborate closely with our clients, aligning solutions to mission goals and building relationships grounded in accountability and trust.

### Operational Support

Our solutions maintain real-time situational awareness, directly supporting mission readiness.

At FedStrong, we transform complex challenges into practical, mission-ready solutions. Our team combines deep federal experience with innovative approaches in program management, software, analytics, and secure cloud services to drive outcomes that matter.

## Program Management and Mission Services

We provide end-to-end leadership for complex federal programs, from planning and scheduling to milestone tracking and continuous process refinement. Our approach blends PMI, Agile, and SAFe practices to ensure measurable outcomes, cost efficiency, and mission alignment. FedStrong program managers emphasize performance metrics, risk reduction, and stakeholder engagement that drive operational success.

## AI, Analytics and Data Insights

We empower agencies with actionable intelligence through advanced analytics, machine learning, and predictive modeling. FedStrong builds AI-powered applications and real-time dashboards that translate complex data into operational clarity. Our solutions improve decision-making, streamline reporting, and ensure enterprise data compliance.

## Mission Driven Software and Systems

FedStrong designs, modernizes, and integrates enterprise platforms and applications to replace legacy systems and accelerate deployment. We specialize in secure, user-focused solutions that improve functionality while minimizing downtime. Our teams bring expertise in agile pipelines, cross-platform integration, and human-centered design for lasting mission impact.

## Secure Cloud and Cyber Resilience

FedStrong delivers secure, scalable, and resilient cloud solutions that protect sensitive federal data. Our capabilities include hybrid and multi-cloud migration, orchestration of containerized solutions, and role-based access controls. We prioritize prevention of breaches, encrypted storage, and automated scaling—ensuring continuity without compromising security.

*FedStrong proudly stands as a Certified Veteran-Owned Small Business.*

## Corporate Experience

### Program Management & Mission Services

- Provide end-to-end program and project leadership, including planning, scheduling, cost/budget management, process re-engineering, communications, training, and executive advisement for enterprise technology initiatives
- Apply expertise in Agile, Scaled Agile Framework (SAFe), and traditional methodologies to lead large-scale integration efforts
- Build performance metrics and reporting frameworks that support executive decision-making
- Conduct Business Process Analysis (BPA) using Business Process Model and Notation (BPMN) standards
- Deliver system, application, and professional skills training through webinars and instructor-led sessions

### Mission-Driven Software & Systems

- Develop and deploy enterprise web applications using COTS, PaaS, and custom solutions
- Lead modernization and integration efforts to build mission-critical, nationwide web-based systems of record
- Conduct accelerated prototyping and deployment to support rapid application modeling
- Oversee cross-platform and multi-system migrations from on-premise architectures to AWS GovCloud environments
- Lead UI/UX design and wireframing initiatives to improve user experience and accelerate concept validation

### AI, Analytics & Data Insights

- Apply predictive modeling and statistical methods to improve decision-making, using AWS Athena and S3 tools to resolve data quality issues
- Support AI policy framework development to guide client adoption of emerging technologies
- Design and deploy machine learning and natural language processing (NLP) solutions
- Build interactive dashboards and real-time analytics using tools such as Tableau and Power BI
- Lead enterprise data governance, stewardship, and compliance initiatives to align client data with industry and regulatory standards

### Secure Cloud & Cyber Resilience

- Deliver strategic cloud planning and architecture designed for continuous availability
- Conduct proof-of-concept evaluations to select and recommend containerization solutions
- Design and manage hybrid and multi-cloud architectures across AWS and Azure environments
- Implement role-based access and identity controls to protect client mission systems
- Ensure compliance with NIST and NISPOM requirements for secure data handling and breach prevention
- Apply encryption protocols to safeguard sensitive data throughout its lifecycle
- Enable automated scaling and resource allocation to optimize performance and reduce costs
